

HW4 Rubric

Video Questions (1pt each)

Please record a short (3-5 minute) video of yourself answering the following questions about your code.

1. What was the first step you took to complete this assignment?
2. Choose one of the comments in your code. Why did you put comments in that place?
3. Explain one area of the code that you changed to improve the speed.
4. Explain a second area of the code that you changed to improve the speed.
5. What testing did you do to confirm your program is correct?
6. You will earn one point if your video is appropriate length (3-5 minutes). You don't need to record any response to this "question."

Your video should include your own voice / face, and the sections of code you're referring to while answering the questions.

Code / Program Assessment Rubric (1pt each)

Please make sure your program correctly addresses the following points.

1. **Results Unmodified:** The program complies and runs successfully generating the same output as the original code-base for a given input (see example run with duration 604800 from the assignment instructions).
2. **Speed-Up Equation:** The program runs faster than before. See equation below
3. **Speed-Up Equation:** The program runs faster than before. See equation below
4. **Speed-Up Equation:** The program runs faster than before. See equation below

Speed Up Equation

$$\text{points earned} = 3 * [1 - (t / 840)]$$

where t = the time in seconds the student's program takes to run with input duration 604800

Example: If their code runs in t = 103.2 seconds they earn $3 * [1 - (103.2/840)] = 2.6\text{pts.}$
